

MINOR IN CYBERSECURITY

The Cybersecurity minor exposes students to current issues in information security, including relevant cybersecurity issues, technologies, and approaches found in the contemporary enterprise. This minor focuses on the technical, managerial, organizational, legal, and ethical aspects of information security. Students will learn to recognize and understand threats to privacy, confidentiality, integrity, and service availability, as well as best practices to defend both digital and physical assets against such threats. The students of this minor will gain a fundamental understanding of computer system hardware, operating system software, and network technology, which collectively form the system platform for assimilating and delivering information products and services to the organization and its external stakeholders.

For further information about policies related to minors, see the Program Policies (catalog.bentley.edu/undergraduate/degree-requirements/#minorspolicies) page.
